

Physician: Forrest S. Roth, MD
Procedure: Morpheus8 on Face and Neck
Energy Level: 50
Pulse Count: 600 pulses, 50% overlapping
Depth: Face (2 and 3mm) Neck (2, 3, and 4mm)
Results: 10 days post treatment

Morpheus8 is a microneedling device that delivers radio frequency energy to remodel the dermal to subdermal tissues. The patient is treated with various depths up to 4mm depending on treatment area. When performing treatment, the handpiece is placed perpendicular to the adjacent area with overlap of approximately 50%. Occasionally, an additional 1-2 passes are necessary to optimize results. The endpoints are minimal to substantial erythema, edema and pin-point bleeding often accompanied by tingling heat sensation.
